Free Student Access to Hands-on AI and Data Science Online Courses and Certificate Opportunities

The NVIDIA Deep Learning Institute (DLI) Accelerated Data Science Teaching Kit includes access to free online, self-paced DLI courses and certificate opportunities for students – a value of up to $90 per student per course. DLI training reinforces AI and Data Science concepts presented in the Teaching Kit and teaches students how to apply those concepts to end-to-end projects. Through built-in assessments, students can earn certificates that prove subject matter competency and can be leveraged for academic and professional career growth. Each course presents a self-paced learning environment with access to a GPU-accelerated workstation in the cloud. All students need is a web browser and Internet connection to get started. ***Although these courses are designed to be taken online, you are free to administer them to your students in a live setting as well.***

Recommended course (with certificate opportunity) for students learning

through the Accelerated Data Science Teaching Kit:

Accelerating End-to-End Data Science Workflows

The Accelerated Data Science Teaching Kit online syllabus suggests students can also take sections of this course during your university semester course, or the entire full-day course upon near-completion of your semester course. Other online DLI courses are suggested in specific modules as well.

To enable these or any other online DLI courses for your students, please send your developer.nvidia.com account email address to NVDLI@nvidia.com with subject line "DS Teaching Kit DLI Online Course Access". You will then receive information about how to give free access to your students.

Detailed descriptions of all available DLI courses can be found at www.nvidia.com/dli.
