

Module 8 Quiz:

Fixing Common Visualization Issues

1. Visualizing data using a pie chart is an excellent idea because people can easily tell apart small angular differences between pie slices.

- A. True
- B. False

Answer: B

2. It is a good idea for bar charts to not start at 0 so we can exaggerate length differences between bars.

- A. True
- B. False

Answer: B

3. We should strive to write a figure caption such that it is "self-contained", so that readers can be able to tell what the main message is when looking at the figure without having to read the full article that contains the figure.

- A. True
- B. False

Answer: A
