

Generative AI Teaching Kit

Free AI Student Training and Certificate Opportunities

The NVIDIA Generative AI Teaching Kit includes access to free online, self-paced DLI courses and certificate opportunities for students – **a value of up to \$90 per student per course**. DLI training reinforces AI and Deep Learning concepts presented in the Teaching Kit and teaches students how to apply those concepts to end-to-end projects. Through built-in assessments, students can earn certificates that prove subject matter competency and can be leveraged for academic and professional career growth. Each course presents a self-paced learning environment with access to a GPU-accelerated workstation in the cloud. All students need is a web browser and Internet connection to get started.

Although these courses are designed to be taken online, you are free to administer them to your students in a live setting as well.

The Generative AI Teaching Kit [online syllabus](#) suggests where students can take online DLI courses relative to the core Teaching Kit content.

To enable these or any other online DLI courses for your students, please send your developer.nvidia.com account email address to NVDLI@nvidia.com with the subject line “GenAI Teaching Kit DLI Online Course Access”. You will then receive information about how to give free access to your students.

Detailed descriptions of all available DLI courses can be found at www.nvidia.com/dli.
